Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

"How long does manual loan verification take?" "We need an instant eligibility check." "I want to automate the risk assessment process."		"Will our low-income clients face bias?" "Is my personal financial data secure?" "The prediction model must be highly accurate."
	Loan Applicant / Credit Officer	
Manually checks credit histories and scores. Inputs customer details into web forms. Reviews income and dependents details.		Anxious about the manual review timeline. Excited about automated fast predictions. Confident with machine learning accuracy.
