

Technology Stack

Date	14 July 2026
Team ID	
Project Name	SMART LENDER
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side <i>(e.g., React, Angular, HTML/CSS)</i>	HTML5, CSS3, Vanilla JS	Allows creation of a responsive, light-weight, and clean web interface.

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	Python, Flask	Enables fast routing and simple integration of Python-based ML models.
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	SQLite / CSV Dataset	Ideal for loading historical training data and saving application logs.
4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	Local Server + Ngrok	Secures a public URL for evaluation and testing without complex deployment.
5	Version Control & CI/CD	Git, GitHub	Tracks changes and ensures seamless collaboration among team members.

6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	Kaggle, Google Drive	For dataset sourcing and hosting pre-trained model files.
